

United States Pharmacopeia and National Formulary

Background

USP reference standards are highly purified substances that are provided specifically for use in the official test methods of the United States Pharmacopeia and National Formulary. When used as a part of the relevant official monograph they provide the means to verify the compliance of a material with USP-NF standards for identity, concentration, quality and purity.

Official USP and NF Reference Standards are made available as required for use in assays and tests appearing in the current edition of the USP-NF. They are collaboratively tested and approved for such use by the USP Reference Standards Committee and released only under the authority of the USP Board of Trustees.

The range of USP reference standards includes:

1. Official USP and NF Reference Standards.
2. Former USP and NF Reference Standards, not required in the current USP or NF, but for which sufficient demand remains.
3. Food Chemicals Codex (FCC) reference standards, specified in the current edition of the Food Chemicals Codex.
4. Authentic Substances (AS), which are highly purified samples of chemicals, that are collaboratively tested and made available as a service to analysts.

The list in this catalogue includes all amendments and new products made official by USP to May 2010. Additional actual information will be included in our newsletters published subsequently.

Production and certification

The development of USP reference standards is a multi-step process that makes much use of voluntary cooperation from the pharmaceutical industry, government agencies including the United States Food and Drug Administration (FDA), and both USP in-house scientific staff and the members of the Committee of Revision.

The following steps are adhered to, and the process takes from one to two years.

1. Preparation and purification of candidate material.
2. Testing and characterisation through a collaborative study (ring test).
3. Initial scientific and statistical review. Further analytical work is often required, and at this stage it is possible that the candidate material is rejected and the procedure restarted.
4. Preparation of a USP Reference Standards Committee letter, containing the data from the collaborative study for use by the Reference Standards Committee. This document is USP's internal equivalent of a certification report. Approval of the document must be unanimous or further analytical work will be requested, or the whole cycle restarted.
5. Packaging and final quality control testing for homogeneity, integrity of the package, etc.

USP generally does not provide certificates of analysis for USP reference standards (as outlined in their Document Disclosure Policy). USP reference standards are solely for use in the official tests and methods of the current official compendia. Unless an assay value is stated, they are considered as being 100.0% pure for compendial purposes. In response to requests from LGC Standards, USP began listing the labelled purity values for reference standards and authentic substances. Each value is followed by a code to indicate the basis of the assignment. For example, a reference standard with a labelled purity of 0.998 mg/mg calculated on the "as is" basis, will be listed as "0.998 mg/mg (ai)". From now on, the values will be included for new lots released since January 1, 2004 and they will be included for all lots as they are released in the future.

Below is a list of the basis codes and their meaning:

- | | |
|------|------------|
| (ai) | as is |
| (dr) | dried |
| (an) | anhydrous |
| (fb) | free base. |

It must be noted that any other use of a USP reference standard in non-official procedures becomes the responsibility of the user.

Proper use

A full description of the background to, proper use of and lot control procedures for USP-NF reference standards is given in General Chapter <11> of the current USP-NF publication. Analysts are strongly advised to review this section on a regular basis. More information on USP publications and subscriptions is given in the 'Publications and subscriptions' section of this catalogue.

Reference standards from USP are intended to be used in connection with the respective monographs, and for no other purpose. If used for any other purpose the responsibility of such use lies completely with the user.

Shelf life and expiry dates

USP reference standards are not labeled with an expiry date. The official lot number system provides greater flexibility than a simple expiry date system. USP reference standards stocks are regularly and rigorously checked. Under normal circumstances a new lot is made official and held for future use, before the old lot is sold out. The old lot remains official for a period of time so that in-house reference substances can be recertified against the out-going and incoming lots and also to prevent unnecessary waste.

The official lot number index is printed six times a year in the USP lot list so that the official status of all lots can be verified. The lot list shows the lot identification code for the current lot as well as any previous lot still official under the column headed "previous lot / date". Any lot shown in this column is official until the end of the month indicated in brackets. For example MOD211 (03/08) means lot MOD211 is official until 31 March 2008. No information or "NONE" in the column means that only the current lot may officially be used.

It is the responsibility of each analyst to ensure that his particular supply of USP reference substance is current.

Validation of secondary standards against USP reference substances

Our customers regularly share with us their experiences of FDA inspectors, and we would like to pass these on to all our customers:

All secondary in-house working standards have to be validated against the CURRENT lot of the USP reference standard, so we advise you to check that you have current lot numbers.

As your supplier of choice, LGC Standards can provide lists of current lot numbers of USP reference standards, so call us to receive these today. We can provide the same service for EP chemical reference substances, which are listed in the EP chapter of this catalogue. Please take this opportunity to subscribe to this free service by contacting your local LGC Standards office.

Replacement lots and back orders

Because of the rigorous nature of the approval process and the time taken, it is not always possible for USP to have a new lot available before an existing lot is depleted. USP provides LGC Standards with regular information about the projected availability of back-ordered USP RS. Please contact LGC Standards for any enquiry.

Storage conditions

The USP-NF states that "generally, reference standards should be stored in their original sealed containers away from heat and protected from light. Avoid humid storage areas in particular". In addition, the USP-NF recommends in its General Notices, that "where no specific storage directions or limitations are provided in the individual monograph, it is to be understood that conditions of storage include protection from moisture, freezing and excessive heat".

Controlled Substances

The USP list contains substances subject to **Controlled Substance** Regulations Schedules I, II, III, IV and V. Special ordering procedures apply, please contact LGC Standards for details and costs.

Restricted Reference Standards

The United States Government restricts the export of chemicals appearing on the US Munition list, the Commerce Control list or in the Chemical Weapons Convention Annex on chemicals. Listed below are USP reference standards that are now currently restricted and may not be exported to any country outside the U.S.A.
